Increasing Productivity with Rotary

Increase the productivity in your body or workshop with Rotary. A battery powered mobile productivity lift assists technicians with everyday work and makes those tasks easier.

The wheels of some passenger cars, SUVs and trucks can weigh as much as 130 lbs., making it

very difficult for one person to comfortably lift and set in place. The lift also allows the wheel to spin for simple lug nut alignment.

The battery powered mobile productivity lift is a powerful and efficient tool for mounting and transporting wheels, hanging doors and offers practical solutions for every workshop environment.

Features

Safety and Protection

The two parking brakes ensure the lift will not move when in use. The lifting spindle is enclosed to protect it from dirt and other debris.

Low Center of Gravity

The mobile productivity lift stabilizes the load utilizing the four rollers and a low center of gravity.

Rotating Casters

All caster wheels rotate a full 360° for greater maneuverability and easier movement around the vehicle.

Battery Charging Connector

The battery charging connector is conveniently located near the emergency stop button for an easily accessed control area.

Double Lithium Battery

The double lithium battery provides up to 100 lifting cycles. The supplied universal charger quickly recharges the battery for continuous use.

One Hand Operation

One hand operation is simple for raising and lowering the lift.

Storage and Convenience

The mobile productivity lift has a tool and lug nut storage area located right on the lift.

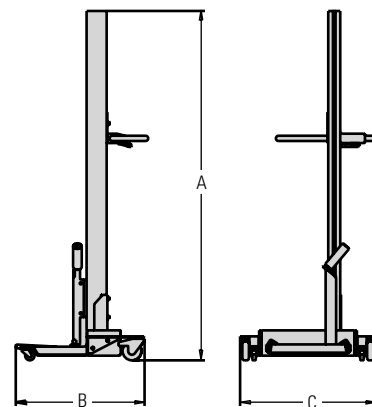

NEW ACCESSORY FOR BODY WORK

Specifications

Model:	MW5
Rise	56 5/8" (1400 mm)
A. Height	73 1/2" (1865 mm)
B. Width	28 1/2" (726 mm)
C. Length	27" (688 mm)
Wheel Dimensions (min-max)	135/80 R13 - 295/25 R22
Weight	132 lbs. (60 kg)
Lifting Capacity	130 lbs. (58.97 kg)
Rise Time	18 seconds

Also available is an accessory to convert the productivity lift into a tool for easy installation and removal of doors and other body panels
